Professional Summary

Passionate and detail-oriented Full-Stack Developer dedicated to building responsive, interactive, and aesthetically polished web applications. Strong expertise in developing eye-catching frontend interfaces with seamless transitions, paired with robust backend architectures. Adept at rapid problem-solving, algorithmic optimization, and end-to-end deployment.

Technical Skills

- **Programming Languages:** JavaScript (ES6+), Java, Python, HTML, CSS, C, C++, C#
- **Frameworks & Libraries:** React.js, Spring Boot, Bootstrap
- **Databases:** MySQL, MongoDB, Cassandra
- **Tools & Concepts:** Git, GitHub, Vercel, Data Structures (Min-Heap, Linked Lists)

Education

ITM (SLS) Baroda University

Expected Graduation: July 2025

Bachelor of Technology in Computer Science and Engineering (CSE)

CGPA: 7.25/10.0

Relevant Coursework: Computer Networking (C2410C4), Data Structures & Algorithms, Artificial Intelligence, Web Development.

Projects

Alumni System | Hackathon Submission

React.js, Spring Boot

- Engineered a university networking platform designed to connect current students with alumni and corporate partners for hiring and internship opportunities.
- Implemented engagement features enabling alumni and companies to organize skill-building sessions and mentoring programs.
- Delivered a fully functional, responsive full-stack application under strict hackathon time constraints.

Cab Booking System

React.js (Frontend & Backend)

- Designed an optimized ride-hailing platform utilizing Min-Heap and Linked List data structures to efficiently assign the nearest available cab to the user.
- Significantly reduced user wait times and improved dispatch efficiency by addressing algorithmic bottlenecks found in existing platforms like Uber and Ola.
- Built a highly responsive, aesthetically pleasing user interface with eye-catching hover effects and seamless dynamic transitions.

Recruitment Portal

PHP/Laravel(Backend), Bootstrap

- Developed a comprehensive, end-to-end job board connecting job seekers with prospective employers.
- Designed a robust, pure React architecture to handle user registrations, job postings, and interactive applicant tracking without relying on traditional PHP frameworks.

Research & Academic Work

Automated Assessment via Unsupervised Learning: A Case Study

- Authored a comprehensive 35-page technical report analyzing AI clustering architectures and unsupervised learning pipelines in educational technology.

Specialized Interests

- **UI/UX & Graphics:** 3D animation, high-fidelity rendering, and motion-based visual effects for web environments.
- **Frontend Design:** Creating complex particle effects and aesthetically polished UI transformations.
